

SECURE QR CODE MESSAGE TRANSMISSION SYSTEM

Program Outputs

This document contains the main program outputs obtained during testing of the proposed secure QR communication system.

Output 1 – Sender / Encryption

Enter the message to send: Hello this is my secure QR message

Encrypted Base64 data:

pMJA+8pY6nLD60nHwL3iryLXYCTfDYiemjFjaFyb1MoJEL2iKoUBydVuKsGp4rS+yQw0d0oQyKerTUZdfEA=

Output 2 – QR Generation and OTP

===== SECURE QR SYSTEM =====

QR code generated successfully!

Saved as: encrypted_message_qr.png

OTP for authorized receiver: 387674

=====

Send the OTP separately to the receiver.

Output 3 – Successful OTP Verification and Decryption

===== SECURE QR MESSAGE =====

Enter the OTP received separately.

=====

OTP verified successfully!

Decrypted message:

Hello this is my secure QR message

Output 4 – Wrong OTP

OTP verification failed!

Message cannot be decrypted.

Output 5 – Receiver

Encrypted Base64 data received:

pMJA+8pY6nLD60nHwL3iryLXYCTfDYiemjFjaFyb1MoJEL2iKoUBydVuKsGp4rS+yQw0d0oQyKerTUZdfEA=

Decrypted message:

Hello this is my secure QR message

Output 6 – Wireshark

Display filter used: tcp.port == 5000. The captured TCP payload contains the encrypted/Base64 data rather than the original plaintext message.
